

For Superior Managing of Industrial Waste Streams.**Think Green.®**

Many states have laws governing the disposal of industrial and special wastes. Even in states without such laws, every company has a responsibility to see that its wastes are handled in a safe and environmentally prudent manner.

Working with Waste Management, industrial and special waste generators can be certain that their wastes will be handled in a way that meets or exceeds all local, state and federal regulations. Using state-of-the-art evaluation techniques, transportation equipment, landfill technologies and long-term monitoring systems, Waste Management provides the highest level of industrial and special waste services in the industry and backs its commitment with written indemnification protecting customers from fines, lawsuits, sanctions or other legal/regulatory actions that can result from the improper disposal of these materials.

WHAT IS INDUSTRIAL AND SPECIAL WASTE?

Industrial and special waste is any non-hazardous industrial process and pollution control waste that requires special evaluation, handling, documentation, packaging and/or treatment prior to disposal. Most industrial and manufacturing processes produce some kind of industrial and special waste as do industrial site clean-ups and wastewater treatment plants.

Examples of industrial and special waste include:

- Asbestos
- Auto fluff
- Bevill wastes
- Bottom ash
- Contaminated soils
- Cutting oils
- Decharacterized wastes
- Delisted wastes
- Drums and drum pads
- E&P exempt wastes
- Filter cakes
- Fly ash
- Incinerator ash
- Industrial sludges
- Lab packs
- Liquids
- Manufacturing residue
- Medical wastes
- Mine tailings
- Nonfriable asbestos
- Off-spec/expired products
- Oils & greases
- Petroleum-impacted soils
- Pollution control residue
- Process wastes
- Railroad ties
- Refinery sludges
- Rinse waters
- Sand trap wastes
- Sewage treatment sludge
- Spills
- Superfund wastes
- Tank bottoms
- Used oil
- UST wastes

VALUABLE BENEFITS

Waste Management offers many valuable benefits to industrial and special waste generators, including:

- Manifest review and preparation
- Compliance with all Department of Transportation (DOT) and local hauling regulations to ensure transport containers are pulled safely and within legal weight limits
- Assistance with profile re-certification to ensure no lapse in service
- Service by drivers who have undergone industrial and specialized waste handling training and/or hold hazardous material certifications

In addition, Waste Management strives to provide superior customer service, including professional account set-ups, routine on-time deliveries and collections and solution-oriented customer support.

LONG-TERM PROTECTION

Waste Management's industry-leading inspection, documentation and landfill monitoring systems ensure long-term protection for both the environment and your company.

From containers to transportation to long-term disposal, Waste Management has the capabilities and experience companies need to maintain an effective industrial and special waste management program.

Industrial & Special Waste Services

FIVE-STEPS TO INDUSTRIAL AND SPECIAL WASTE HANDLING

Waste Management's industrial and special waste services involve five separate steps, each of which is critical to successful industrial and special waste disposal.

STEP 1: EVALUATION

Waste Management representatives will work with you to determine the nature of your industrial and special waste. They will create a waste profile and send it to Waste Management technical managers for review and approval. Factors considered include state regulations, the process by which the waste was generated, its physical and chemical properties, its volume and its method of packaging and shipment.

STEP 2: IDENTIFYING DISPOSAL ALTERNATIVES

Some wastes can be directly landfilled; others can be disposed of following special treatment; some materials can be recycled; while others may require incineration. Your Waste Management representative will present you with the management options available for your industrial and special waste.

STEP 3: PROVIDING PROPER DOCUMENTATION

Waste Management personnel will assist you with the preparation of shipping documents and/or manifests.

STEP 4: LANDFILL DISPOSAL

Following the landfill gate inspection, Waste Management will direct your industrial and special waste to the "working face" of the landfill where it will be subject to additional visual inspection before final acceptance and unloading.

STEP 5: ONGOING SITE SECURITY AND MONITORING

Waste Management will ensure the physical security of your disposed wastes. All of Waste Management's landfill sites are protected by fences, single gate entry stations and, in many cases, 14-hour security cameras.

For more information on industrial and special waste disposal, contact your Waste Management Landfill and Industrial Services sales representative.
